Patient Care & Education

- Displayed outstanding interpersonal skills with patients, families, physicians and staff
 - Integrated patient teaching, patient advocacy, and Swanson's caring theory while caring for patients and their families
 - Educated patients and their families on disease processes, medical-surgical procedures and other aspects of therapeutic regimens, including medication and pain management techniques.
 - Applied knowledge to obtain additional information about patient's signs and symptoms while relating them to pathophysiology and their disease process
 - Utilized critical thinking skills to the nursing process: assessed conditions, demonstrated effective decision making, implemented appropriate interventions, anticipated potential complications, and evaluated care outcomes
-

Technical Skills

- Administered and documented scheduled & PRN medications safely utilizing the five rights
 - Initiated & maintained IV pumps, tubing, flushes, and IV medications
 - Experienced with urinary catheters, drainage tubes, tube feeding, and suctioning
 - Recognized the significance and impact of abnormal lab values and reported immediately
 - Prioritized care for patients utilizing a written organization/time management method
 - Delegated effectively within the practice to increase efficacy and maximize use of resources
 - Used Epic and Meditech to accurately document, chart, and obtain information
 - Performed a full range of thorough shift and system assessments
-
